DUAL-ENERGY THERMAL ENERGY CONVERSION SYSTEM

Normal temperature tap water enters the heat exchanger,
absorbs the heat of boiling water, and the water temperature rises rapidly. Only a little heating is needed to reach the boiling temperature.

Technical principle of energy-saving warm water dispenser :

Municipal water → **Tertiary filtration** → **100℃ boiling** → **Heat exchange** → **Warm water**

PRINCIPLE OF STEPPING HEATING TECHNOLOGY

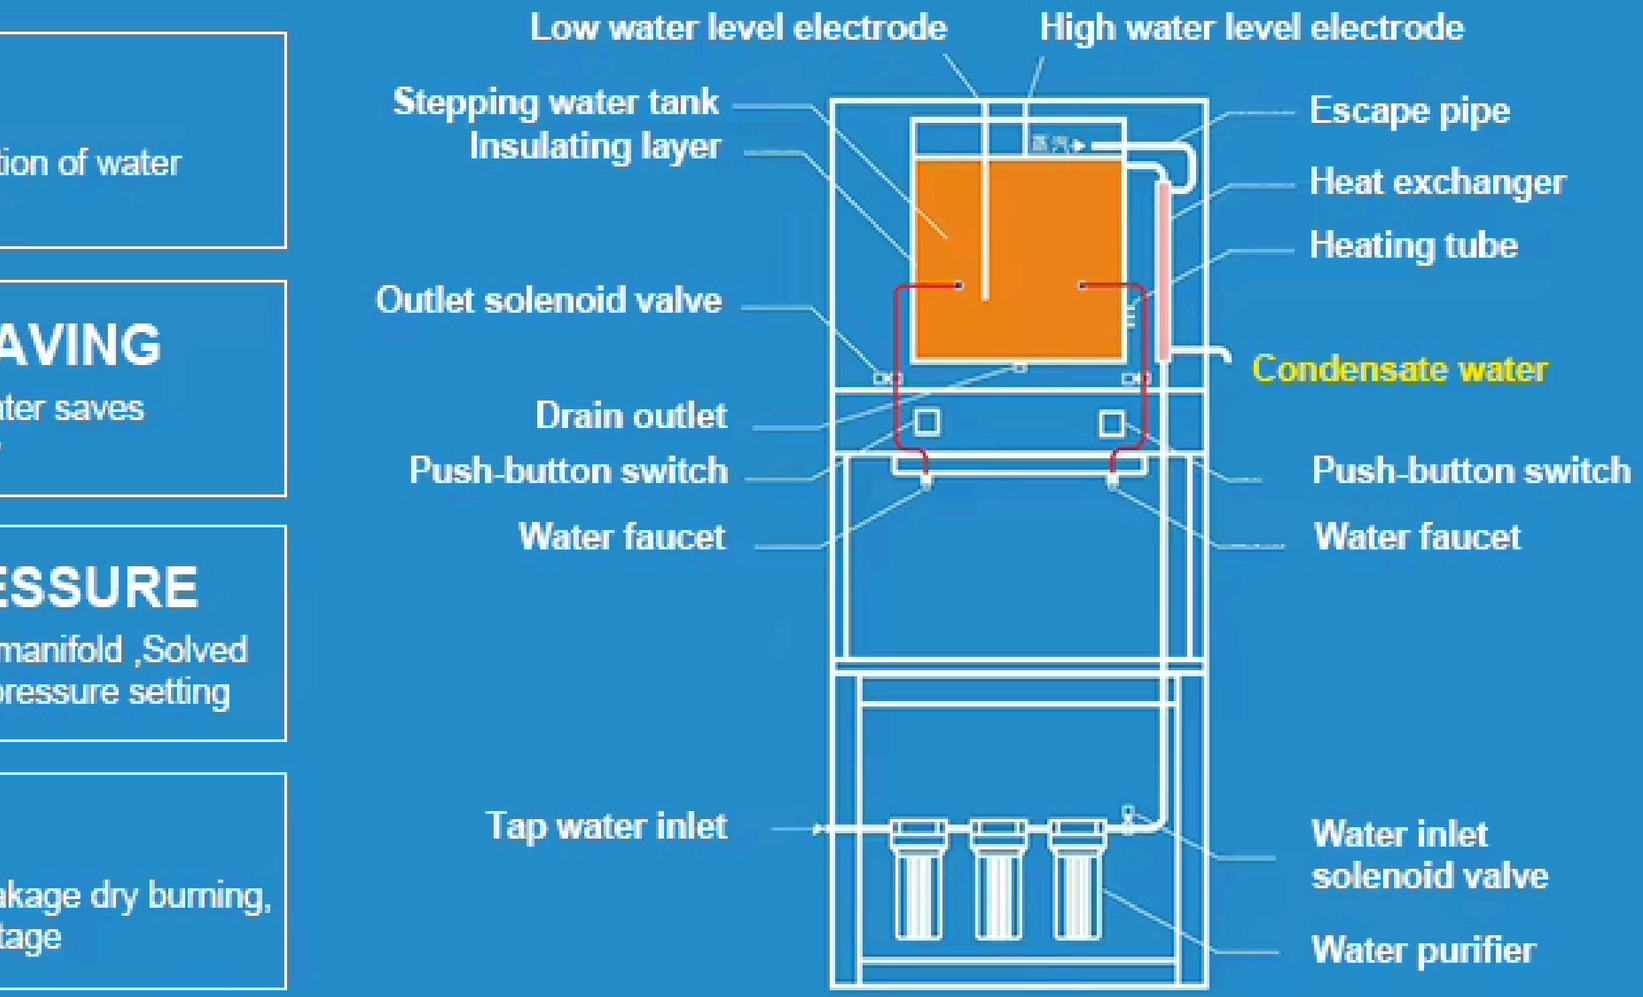

Microcomputer control, the use of step heating technology, so that youenjoy each cup of healthy water.

HEALTH
Complete separation of water and electricity

POWER SAVING
Drinking warm water saves 83.23% of energy

ZERO PRESSURE
Double pressure manifold ,Solved the water tank 0 pressure setting

SAFETY
Automatic anti-leakage dry burning, steam water shortage
